

HAIR EXTENSIONS & THICKENING

Advantages

The greatest advantage of hair extension is that it gives you your dream hairstyle instantly. You do not have to wait for six to twelve months to get the long hair that can swing past your shoulder.

Hair extensions give you the flexibility to try new hairstyles without getting fixed to one. In case you get bored with the long hairstyle, remove the extensions and get a new look.

You are sure to feel the pain when you cut down the hair that you have grown with so much patience and care. However, in case of hair extension, you will never have to face this regret and you can try as many styles as you want.

Hair extensions not only give an added length to your real hair, but also extra thickness and volume. It works excellently for fine, limp and thinning hair.

You can undertake different color experiments on your hair extension, without worrying about any damage to your real hair. You also put on different beads and create a style trend of your own.

Getting hair extensions from a salon is not painful at all. And thus, you will not be hurt even a bit, when you have the hair extension.

Hair extensions can be easily taken care of and are easy to maintain.

Extensions can be washed and treated in the same way as your real hair.

PRE BONDED

Pre Bonded Hair Extensions come with Keratin Resin bonds already attached. Keratin is a natural protein found in human hair. Keratin based bonding resin is the strongest yet kindest, most flexible hair extensions attachment resin currently available. Unlike Silicon based glues, which are difficult to remove and may damage your hair, Keratin resin is easily removed causing no damage to your own hair. These bonds are coloured similarly to the Hair Extensions and are about the size of a grain of rice so that they are virtually undetectable.

Pre Bonded Hair Extensions are attached to your hair via a small heated applicator, which melts the bond at a fairly low temperature. Your Hair Extension Technician will then roll this into a seal around small sections of your own hair. Pre Bonded Hair Extensions can be trimmed prior to fitting to tailor the size and density of each the hair extension strands to each individual client. Essential for ensuring your bonds are small enough to remain undetectable around your hairline and crown!

Pre Bonded Hair Extensions can be applied in one solid colour or multiple colours can be applied in combination to create highlights and lowlights as well as fashionable colour flashes.

Unlike the Hot Fusion Microbond Hair Extensions method, most wearers of Pre Bonded Hair Extensions experience virtually no extension hair shedding with this method. As our Pre Bonded Hair Extensions take less time to put in than our Hot Fusion Microbond method they are also less expensive.

More practical and longer lasting than Clip-in Hair Extensions, each fitting of Pre Bonded Hair Extensions should last around 3 months with correct care and regular maintenance. One of the best methods for hair extensions and fast becoming very popular!

(N.B – Not suitable for clients with excessively oily / greasy hair as this can break down the bonds and cause the extensions to slip out).

MICRO RINGS

T h i s m e t h o d i s c o m p l e t e l y g l u e , h e a t a n d c h e m i c a l f r e e

Small sections of your own hair are gently pulled through the micro rings. Hair extension strands are placed inside the rings and then the micro rings are squeezed shut using specialist hair extension pliers. This in effect clamps the hair extensions to your own natural hair. The micro rings / micro links sit flat against your scalp.

Micro rings (also known as micro links, micro beads and micro loops) are small metal rings coated in plastic to provide comfort and cushioning to your scalp. There are a variety of different types, shapes, sizes available and we'll select the most appropriate attachment rings for you depending on your hair type and fitting preference. We have micro rings available that are silicone lined to protect your own natural hair and help guard against slipping. We also use Copper Tubes (sometimes known as Micro Locs) that sit particularly flat once fitted and are exceptionally discreet. These can be a great option for clients with finer hair who find normal micro rings difficult to hide.

Micro Rings and Copper Tubes come in a variety of colours and will be chosen to blend in with your extensions. Hair styling products will not break these rings down.

Micro Ring Hair Extensions can be applied in one solid colour or multiple colours can be applied in combination to create highlights and lowlights as well as fashionable colour flashes.

More practical and longer lasting than Clip-in Hair Extensions, each fitting of Micro Ring Hair Extensions should last at least 3-5 months with correct care and regular maintenance. A very cost effective method as the extension hair can be removed and re-fitted if still in good condition.

This method is a favourite amongst celebrities and is the main method used by top London and Manchester salons “Tatiana Hair Extensions”.

(N.B – Not suitable for clients with excessively weak or very fine hair.)

MICRO WEFT

T h i s m e t h o d i s c o m p l e t e l y g l u e , h e a t a n d c h e m i c a l f r e e

A fantastic new take on the usual Micro Ring method. Instead of applying individual Hair Extensions strand by strand, the Micro Ring Weft method allows the hair to be attached in several long strips via a small number of Micro Rings or Micro Links. This dramatically reduces fitting time.

The hair extensions come as weft strips that are placed in horizontal rows against your scalp. Small sections of both your own hair and hair from the extension weft strip are gently pulled through micro rings which are then squeezed shut, holding the weft of hair extensions in place.

For clients with very fine hair or those that struggle to hide attachment rings, there is also a variation on this method called **Micro Ring Sew In Weft**. During application, micro rings are attached to your own hair and then the weft is sewn in on top of these. This keeps all the micro rings hidden underneath the weft hair. This version of the Micro Ring Weft method will not slip as easily in finer hair and therefore lasts longer.

Micro Ring / Micro Link Wefts are ideal for clients looking to add a subtle boost in volume and no more than 1 – 2" in length.

These hair extensions are available in a variety of colours and lengths.

More practical and longer lasting than Clip-in Hair Extensions, each fitting of Micro Ring Weft Hair Extensions lasts up to 1 month approximately.

If weft hair is well maintained and still in good condition, it may be re-used and re-positioned with new micro rings or removed and stored carefully for re-application at a later date.

As a more temporary method of Hair Extensions, Micro Ring Wefts are ideal for bridal hair, weddings or other special occasions. Also, great for those on a budget or for people unsure about trying Hair Extensions for the first time.
